

## PRESS RELEASE

*Belgravium and DLoG join forces:*

### **Belgravium and DLoG join forces for ruggedized full-screen solutions**

1st Feb 2011 - DLoG UK, a leading provider of rugged and mobile industrial PCs, announced today that it has established a partnership with leading mobile computing solution provider Belgravium. Belgravium will now offer the DLoG range of full screen industrial PCs to clients within in the warehouse and supply chain sectors.

DLoG develops robust and mobile industrial computer solutions. Proven in tough warehouse and logistics applications, the company's solutions incorporate all the latest cutting edge technologies and values of quality, reliability and flexibility.

Belgravium is a UK-based warehouse & logistics solutions provider, incorporating everything from software provision to line marking and labelling. As a central focus, Belgravium helps organisations build rugged mobile computing hardware solutions to automate their data collection requirements and take advantage of the operational and process efficiency benefits that mobile computing technology can deliver.

Working proactively with DLoG, Belgravium will now be offering DLoG's 7,10,12 and 15" full touch screen terminals as part of its warehouse and logistics solution offering. IP67 rated for dust and waterproofing, the terminals complement the rugged environments Belgravium's clients operate within. Cold stores and deep freeze applications are particularly well catered for as the DLoG vehicle mountable terminals are fully functional in extreme environments, with operating temperatures from -30 to +50°C (-22 to 122°F). DLoG offers first to market 7" and 10" LED touchscreen displays on the new XMT and MTC terminals, which means not only improved contrast and increased life expectancy but that no heater is required for operation in deep freeze or outdoor areas.

Mike Turner, Group Marketing Manager, Belgravium remarked: "As a hardware manufacturer ourselves, we are extremely meticulous in our

selection of third party devices to add to the Belgravium portfolio. Any device that we promote and support has undergone extensive in-house testing by our own engineers. DLoG equipment is designed and manufactured to an extremely high standard and deserves its reputation as an 'ultra rugged' range of devices. The performance, flexibility and quality of their product will deliver excellent operational and commercial benefits to our end users and partners".

John Davis, Managing Director of DLoG UK comments, "Belgravium's experience in the warehousing and logistics sector is unparalleled. They have been supplying turnkey IT solutions to blue chip and SME clients for several decades and we didn't hesitate when considering them as a viable reseller for our range. With an extremely knowledgeable technical support team we have no doubt that Belgravium will be able to provide the optimum support for customers, from original specification right through to post-sale technical services."

#### About DLoG

DLoG develops and manufactures robust and mobile Industrial PCs for logistics applications, on large machines and in industrial manufacturing. Their industrial PCs are convincing anywhere visualization is required in extreme environments. They offer all conventional operating systems and thereby cover the entire bandwidth of mobile applications. DLoG industrial PCs are available in many compact sizes and with screen sizes from 7" to 15".

#### About Belgravium Ltd

Belgravium is widely considered as a leading solutions provider within the data capture industry and has a large and varied customer base to reinforce this. With well in excess of 300 site installations throughout Europe, Belgravium's customer base includes many household names in manufacturing, retail and distribution. Some of Belgravium's major users include Corus, Toys R Us, John West, Great Universal Stores, Coca-Cola, Hygena and most of the prominent names within the Third Party Logistics sector ( Wincanton, P&O, TNT etc. ). Belgravium offers full local maintenance support and rapid repair turn-around, via its own team of dedicated service engineers.
