## PRESS RELEASE

### Seiki Systems and DLoG (UK) exhibit together for the first time at MACH 2010

MACH 2010 will be the first time that Seiki Systems Ltd and DLoG (UK) Ltd have exhibited together since joining forces in May 2008. The combination of Seiki and DLoG software and industrial rugged computers provides users with a robust shop floor data collection, visualisation and communications solution.

Seiki Systems will be showing its full solution offering, which is now wider than ever before and can support customer requirements from order processing, to production planning, through to manufacturing execution and performance data capture, with flexible and configurable functionality supported by the experienced team of Seiki and DLoG engineers.

With an increasingly strong focus on what is happening on the shopfloor, Seiki's Networked Manufacturing System (NMS) remains one of the most flexible and comprehensive shop floor communications solutions available to SME manufacturers in the UK today. Taking a lean approach to manufacturing means eliminating waste and reducing non-value added activities for which fast, effective and simple shop floor communications are key. Seiki NMS is configured to collect data, disseminate information, increase visibility and automate routine activities, providing essential support in efforts to operate a lean organisation, whilst creating a trusted factory knowledgebase where performance and quality can be achieved through control and continuity. MACH 2010 will be the first chance to view the latest version of Seiki NMS with overall system speed and performance enhancements and a brand new user interface, demonstrated on DLoG touchscreen IPC terminals.

Whether querying inventory stock of finished or unfinished goods in real-time, capturing operational data reliably, or displaying information such as works order status, a DLoG industrial computer is ideal. As well as featuring the proven DLoG IPC rugged industrial computers, DLoG will also be showing the DLoG ITC 7 for the first time. A lean 15" touch screen industrial client PC, the ITC 7 is ideally suited to applications such as data acquisition in assembly and manufacturing. The ITC 7

expands the existing DLoG portfolio of robust industrial computers for applications where space requirements are at a minimum and for IT technical implementation options such as the use of browser technology for machine terminals. Benefiting from a space saving depth of just 70mm, the ITC 7 also reduces the footprint on the shopfloor.

The combination of Seiki and DLoG has enabled the Group to extend its ability to deliver innovative solutions, high quality services and create a synchronised IT environment by linking shop floor activities to top floor production driven business processes to enable companies to execute the manufacturing process more effectively and profitably. A re-branded Seiki portfolio will be launched at MACH, and will incorporate Seiki ERP, Seiki Scheduler, Seiki NMS, Seiki SFDC, Seiki Monitoring, Seiki Jobpack and Seiki DNC.

MACH 2010 - 7-11 June - NEC Birmingham

Hall: 5

Stand: 5292

#### **About Seiki Systems Ltd**

Seiki Systems Ltd is a leading UK supplier of manufacturing execution software solutions, integrating the entire manufacturing enterprise to provide an immediate, visual and dynamic picture of the 'plan to make' production process. Established for over 16 years, the company specialises in developing manufacturing systems designed to maximise the efficiency of production equipment and plant resources. The Seiki solution comprises of a suite of modular software that can be utilised for planning, controlling and improving manufacturing throughput.

#### **About DLoG (UK) Ltd**

DLoG (UK) Ltd is celebrating nearly 20 years in the provision on industrial computing solutions. With the introduction of the first industrial PC in 1990 DLoG have vast experience in the development of this type of hardware. Current products extend from touch screen industrial PCs (IPC) for displaying CAD data and work instructions in factories to the Mobile industrial PC terminals used in vehicles extensively in the logistics and warehousing sectors. Supporting the delivery of your essential business information direct to the operator at the point of use, our PC hardware can be configured with your choice of established and robust operating systems. With a range of screen sizes for mobile and static applications, coupled with the ability to develop solutions that are aligned with your build specifications, we maintain a strong focus on customer requirements, high quality and technical standards which enables us to supply and support customers in the successful implementation of even the most demanding computing infrastructure.
